MANUAL TESTING REPORT

GREENITCO Website

Project: Technical Task – Manual Testing
Tester: Meehir Choudhary
Testing Start Date: 13 October 2026
Testing Environment: Google Chrome
Testing Type: Manual Functional, UI, Validation, Negative, and Responsive Testing
Report Status: Testing completed for recorded test cases; retesting pending for one case.

---

1. Objective

The objective of this testing activity was to verify the functionality, usability, navigation, form validation, responsiveness, and error handling of the GREENITCO website. The testing was performed manually using Google Chrome to identify defects and verify that the website behaved according to the expected results.

2. Scope of Testing

The following website sections and functionalities were covered:

1. Homepage
2. Request a Quote form
3. History page
4. Products page
5. Services page
6. Connect navigation
7. Schedule a Call navigation

Testing included navigation links, form fields, required-field validation, email and phone validation, math verification, form submission, social media links, search functionality, page layout, and responsive behavior.

3. Test Execution Summary

Test Execution Status	**Number of Test Cases**
Total Unique Test Cases	92
Passed	79
Failed	12
Not Tested	1

Test Execution Status	Number of Test Cases
Total Executed	91
Pass Percentage	86.81%

Pass Percentage Formula:

Pass Percentage = (Passed Test Cases / Total Executed Test Cases) × 100

= (79 / 91) × 100 = **86.81%**

Note: Repeated Request a Quote test cases listed under the Demo section have been excluded from the unique test-case count.

4. Section-wise Test Summary

Website Section	Total	Passed	Failed	Not Tested
Homepage	15	12	3	0
Request a Quote	25	20	4	1
History	17	16	1	0
Products	19	18	1	0
Services	14	13	1	0
Connect	1	0	1	0
Schedule a Call	1	0	1	0
Total	**92**	**79**	**12**	**1**

5. Defect Summary

The following defects were identified during manual testing.

Defect ID	Module	Defect Description	Priority	Status
BUG-001	Homepage	Connect navigation link does not respond when clicked.	High	Open
BUG-002	Homepage	Schedule a Call link redirects to a Page Not Found error.	High	Open
BUG-003	Homepage	Displayed email address is not clickable.	Medium	Open

Defect ID	Module	Defect Description	Priority	Status
BUG-004	Request a Quote	Incorrect math verification answer still allows form submission and displays a success message.	Critical	Open
BUG-005	Request a Quote	Invalid verification does not reliably prevent successful submission.	Critical	Open
BUG-006	Request a Quote	Duplicate form submission prevention is not working as expected.	High	Open
BUG-007	History	Displayed email address is not clickable.	Medium	Open
BUG-008	Products	Displayed email address is not clickable.	Medium	Open
BUG-009	Services	Displayed email address is not clickable.	Medium	Open

6. Key Findings

- Most primary navigation links and tested page sections functioned as expected.
- Required-field validation and invalid email and phone number checks passed the recorded test cases.
- The Request a Quote form successfully submitted when valid information and the correct math verification answer were provided.
- Incorrect math verification did not reliably prevent form submission, creating a significant validation concern.
- Connect and Schedule a Call navigation did not function as expected.
- Email links were not clickable on the Homepage, History, Products, and Services pages.
- Duplicate form submission handling requires further investigation.
- Page scrolling, general layout, and responsive behavior passed the recorded checks.

7. Recommendations

1. Correct the math verification and form submission logic to ensure that invalid answers prevent submission and do not trigger success messages.
2. Investigate and resolve duplicate form submission handling.
3. Fix the Connect navigation link and the Schedule a Call destination.
4. Make displayed email addresses clickable and verify their configured email destinations.
5. Retest all failed test cases after the defects have been fixed.

6. Perform regression testing on the affected modules to ensure that existing functionality remains unaffected.
7. Complete the pending retest for the quote form after validation errors.

8. Conclusion

Manual testing of the GREENITCO website identified that most of the recorded test cases passed successfully. However, several defects remain, particularly in quote form validation, navigation, email links, and duplicate submission handling.

The overall pass percentage for executed test cases is **86.81%**. The website is partially functional, but the identified defects should be resolved and the affected test cases should be retested before the final release decision.

Final Recommendation: Conditional approval only after the critical validation defects and high-priority navigation issues are resolved and verified through retesting.
